

Cyber-Security Assessment

Products / Service description (Summary)

Unfortunately, cyber-attacks are nowadays part of everyday life. You should therefore assess whether your technical, organizational and employee-related measures are sufficient to protect against cyber risks. To be successful in the long term, SMEs must use digital technologies to involve their suppliers, employees and customers in their processes. It requires a complex interlinking infrastructure within your company and even over the internet. This drastically increases the risks from cyberspace, as your data is exposed.

Information security is more than just backup of data. It also includes securing longer-term business activities and protecting the knowledge within the company. Information security is therefore a strategic/organizational and not a purely technical issue. In our offer we put our 20 years of experience in the field of information security at your disposal.

Clarification: This offer does not include a penetration test or technical audit.
